Proposed Topics

Health and Hygiene: People in Pakistan are not entitled to receive free treatment and no adequate awareness is seen throughout the country. This results in people dealing with severe health problems at a young age which further decreases the life span of the society.

Farming: As it is reported that 47.09% land is agricultural land; 30.2% present males and 67.2% present females are involved. Although there is a vast amount of people in this field the experience they have or the techniques they inherited from their forefathers are less efficient yet more time and energy consuming.

Business: Many people in Pakistan are involved and want to be involved in this field. Lack of knowledge, skills and guidance prevents them from working effectively. Business Skills in all areas of business are needed.

Note: The dependency of all these three countries are alike.

The Nations TV by God's Grace will cover all of these topics so that people could benefit spiritually and educationally.

Blessings,

Pastor Oliver Zia
